

Abstract

~~Method for storing search features of an image sequence~~

- 5 For access to an image sequence comprising individual search features, these search features are correspondingly stored in the image sequence. To this end, a list of search features, which are preferably in plaintext, is prefixed to the image sequence,
- 7 ~~+~~ stored behind the image sequence or ^{stored} in the image sequence. Besides an information entry, each search feature comprises a reference to an image within the
- 10 image sequence. Access is guaranteed via the individual search features.
